Energy Analyzers and Meters

Rail Type Energy Meters

The energy meters, “with a white backlit LCD screen for perfect reading,” are designed for single-phase and three-phase energy measurements in residential and utility applications. These devices measure and display various important electrical parameters and provide a communication port for remote reading and monitoring. The bi-directional energy measurement feature makes them an ideal choice for solar PV energy metering. Additionally, models with LoRa communication, as well as prepayment or generator tariff options, are also available.

Application Areas

- Shopping Malls
- Marinas
- Residences
- Airports
- Factories
- Holiday Villages
- Penal institutions
- EV Chargers

Advantages

- Class 0.5 and Class 1 applications
- Competitive prices

- Compatibility with all software through Modbus RTU protocol communication
- Measurement capability up to 100 Amperes
- Bidirectional measurement capability
- Occupies less space compared to competitors
- Higher measurement accuracy classes
- Wide measurement range
- Billing of high-cost liquid fuels with generator tariff option
- Easy collection of payments from subscribers with prepaid types and the advantage of upfront payment collection
- Din Rail mounting (35mm)
- Wide solution capability with direct and current transformer models
- RS485(Modbus) or Wireless data transmission via LoRaWAN communication
- No cable and labor costs
- Fewer failure points compared to wired systems due to wireless feature
- Convertible to panel type with additional equipment (Just NDM70 series)
- White backlit LCD display
- Scrollable settings display
- Support for AMR, SCADA system
- Multifunction measurement
- Easy payment collection from subscribers (prepaid types)

Energy Analyzers and Meters

NDM30 Lora Rail Type Single Phase Electricity Meter

Standarts and Protocols:

- International standards: IEC 62053-21/ EN50470-1/3
- Interface standard and protocol: LoRaWAN Specification 1.0.2
- Electromagnetic HF fields: IEC 61000-4-3
- Radiated and conducted emissions: EN55022
- Electromagnetic Compatibility: EN61326-1:2013 & EN61326-2-3:2013
- Low Voltage Directive: EN 61010_1:2010+A1:2019 & EN 61010-2-30-2010

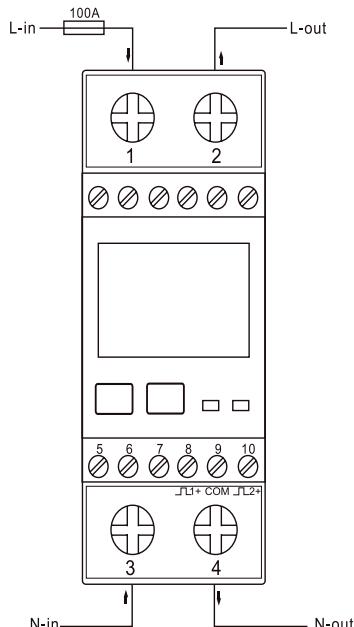

Features

- Nominal voltage(Un) 120V or 230V AC
- Operational voltage 80%~120% of Un
- Insulation capabilities
 - AC voltage withstand 4KV for 1 minute
 - Impulse voltage withstand 6KV-1.2μS
- Basic current(Ib) 10A
- Maximum rated current(Imax) 100A
- Operational current range 0.4% Ib-Imax
- Over current withstand 30 Imax for 0.01s
- Operational frequency range 50 or 60Hz
- Internal power consumption ≤ 2W/10VA
- Pulse output 1 1000imp/kWh(configurable)
- Pulse output 2 1000imp/kWh
- Max reading 99999.99kWh

Performance Criteria

- Voltage: 0.5%
- Current: 0.5%

Dimensions

Energy Analyzers and Meters

Panel Type Energy Analyzers

Energy analyzers are designed to measure key electrical parameters such as Voltage (V), Current (A), Frequency (Hz), Power Factor (PF), Active, Reactive, and Apparent Power (kW/kVA/kVAr).

They also measure Import, Export, and Total Active and Reactive Energy (kWh/kVArh). The measured parameters can be transmitted to SCADA and energy management systems via various communication interfaces, such as RS485 Modbus-RTU and Ethernet Modbus-TCP.

Energy analyzers are compatible with 1A or 5A Current Transformers (CT) and can be configured to work with a wide range of CTs. They can also be configured to work with a voltage transformer.

The devices offer digital inputs, digital outputs, pulse outputs, and RS485 Modbus RTU communication without the need for additional modules.

Instead of programming via Modbus, the device features a password-protected setup menu within the device software, allowing configuration without the need for communication-based integration.

Energy analyzers do not require a separate auxiliary power supply for operation.

The auxiliary power is drawn from any of

the voltage inputs, ensuring that if one phase fails, the device will continue to measure by drawing power from another phase.

Application Areas

- Shopping Malls
- Organized Industrial Zones
- Electrical Panel Manufacturing
- Marinas
- Residences
- Airports
- Factories
- Resorts

Advantages

- Suitability for panel type application solutions
- Class 0.5 and class 1 applications
- Competitive prices
- Compatibility with all software through Modbus RTU protocol communication
- Direct Ethernet connection feature with Ethernet output models
- Bidirectional measurement capability
- Scaled display by entering the ratios of current transformers to which it is electrically connected into the interface
- AC/DC supply capability with auxiliary supply terminal
- Different electrical connection options for TT and TN
- Optional multi-tariff
- Pulse output feature

- EN61326-2-3:2013
- EN 61010_1:2010+A1:2019
- EN 61010-2-30-2010

Features

- Multi-parameter measurement
- Individual harmonic distortion from 2nd to 63rd
- Supports 3p4w, 3p3w, 1p2w systems
- Current transformer (CT) and voltage transformer (PT) connection
- RS485 Modbus communication
- Pulse output
- Multiple tariffs available

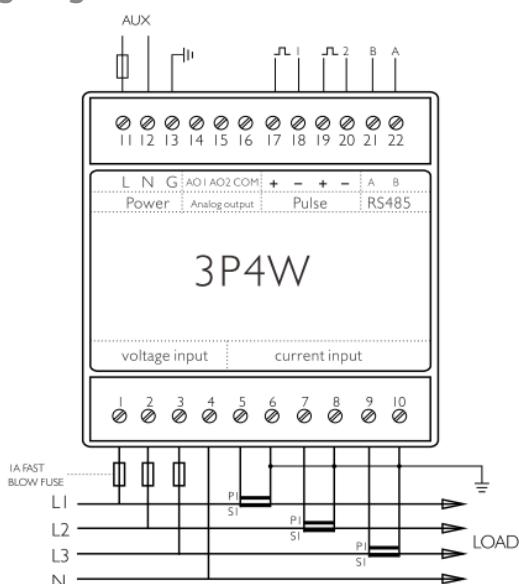

Outputs

- Pulse width: 60 / 100 / 200 ms
- SO pulse rate: 0.01 / 0.1 / 1 / 10 / 100 kWh/kVAh
- SO 2 pulse output (non-configurable): 3200IMP/kWh
- Communication: Modbus RTU (RS485)
- Input Voltage: 3x230 / 400 VAC

Accuracy

- Voltage (V): $\pm 0.5\%$ of the maximum range
- Current (A): $\pm 0.5\%$ of the maximum range
- Frequency (Hz): $\pm 0.2\%$ of the nominal frequency
- Power Factor (PF): $\pm 1\%$ of unity (0.01)
- Active Power (W): $\pm 1.0\%$ of the maximum range
- Reactive Power (VAr): $\pm 1.0\%$ of the maximum range

Wiring Diagram

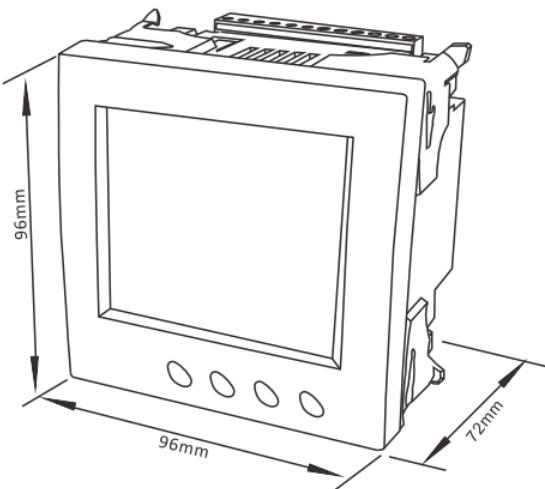

- Apparent Power (VA): $\pm 1.0\%$ of the maximum range
- Active Energy (kWh): Class 1, according to IEC 62053-21 standard
- Reactive Energy (kVAh): Class 2, according to IEC 62053-23 standard
- THD: Total harmonic distortion for 2nd to 63rd harmonics

Environment

- Operating temperature: -25 °C to +55 °C
- Storage temperature: -40 °C to +70 °C
- Relative humidity: 0% - 95%, non-condensing
- Shock: 30g in 3 planes
- Vibration: 10Hz - 50Hz, according to IEC 60068-2-6 standard, 2g
- Dielectric voltage: 4kV between ground, voltage, and current
- Altitude: Up to 2000 meters
- Warm-up time: 5 seconds
